# Database

**Config dir** for database: honza2scale/src/main/resources/application.properties

## **Core properties:**

spring.datasource.url

- JDBC URL of the database.

spring.jpa.database-platform

- Name of the target database to operate on.
- Auto-detected by default.
- Can be alternatively set using the "Database" enum.

spring.datasource.username & spring.datasource.password

- User name and password of the database.

# User manual

It's google document. For the rights of this document ask its owner.

Copy of user manual:  
[honza2scale/doc/userManual.pdf](#)

# Ports

Backend: 8080

Frontend: 3000

## Add user to database from class AddUserToDatabase

You can also add user to database by running AddUserToDatabase.java.  
userName and password to hash you can simply setup in this class.
